

Chairmat

The chairmat is the result of engraving NUDEC®PET sheets using a special roller. Two types of chairmat are available:

1. With spikes on one side, so that the sheet is firmly fixed to the mat or carpet.
2. With an anti-slip film on one side and a smooth texture on the other side. Designed for use on hard surfaces, such as parquet or ceramic floors.

Characteristics

The chairmat combines a high impact strength with a very good chemical resistance. Both features are very beneficial in the context where this product will be set.

These PET sheets protect the floor or floor covering (carpet, mat, parquet floor, tiles, etc.) from any damage caused by continued use. They are perfect against the effect of office chair wheels, as well as against the wear caused by shoes in specific work areas or walkways.

Properties

- Excellent impact strength and rigidity.
- Excellent resistance to chemicals, solvents, detergents oil and grease.
- Easy cleaning and maintenance.
- NUDEC®PET Chairmat sheets are produced up to 1.250 mm width and gauges from 1,8 mm to 3,1 mm.

Technical data

Polymer	Polyethylenterephthalate-polyester
Thickness	1,8 - 3,1 mm
Maximum size	1.250 mm (width)
Impact strength	High
Fire performance	DIN EN-13501-1 Class Bs2d0 NFP 92-507 Class M2
Colors	Gloss
